Abstract PURPOSE: To obtain a composition containing fatty acid isopropanolamide, a surfactant, a siloxane compound, a specific polymer compound and pearl gloss agent and having excellent conditioning effect on hair.

CONSTITUTION: This composition contains the following (a) to (e) components as active ingredients: (a) A fatty acid isopropanolamide having 8-16C acyl group (e.g. isopropanol amide laurate), (b) A surfactant, preferably 0.5-50wt.% ionic surfactant, (c) a siloxane compound, preferably 0.01-25wt.% dimethylpolysiloxane having ≥ 500 cs viscosity at 25°C, (d) 0.01-5wt.% polymer compound having ≥ 1000 cps viscosity of 1% aqueous solution at 25°C and excepting a siloxane compound (e.g. cationized cellulose derivative) and (e) 0.1-10wt.% pearl gloss agent (e.g. fatty acid glycol diester). The composition is excellent in usability and disperse stability and exhibits excellent pearl gloss.
